

EXPANDING CROSS-CHAIN TRANSFERS BEYOND SMART-CONTRACT BLOCKCHAINS

The cross-chain solutions sector is valued at over \$15 billion. However, the most demanded solution for connecting programmable blockchains like EVM, Solana, and Cosmos to **non-programmable** blockchains like Bitcoin or privacy networks has been missing—until now.

THE SOLUTION

Bridgeless utilises its robust Secure Multi-Party Computation approach to create a decentralised cross-chain ecosystem on **its own Bridgeless L1 blockchain**.

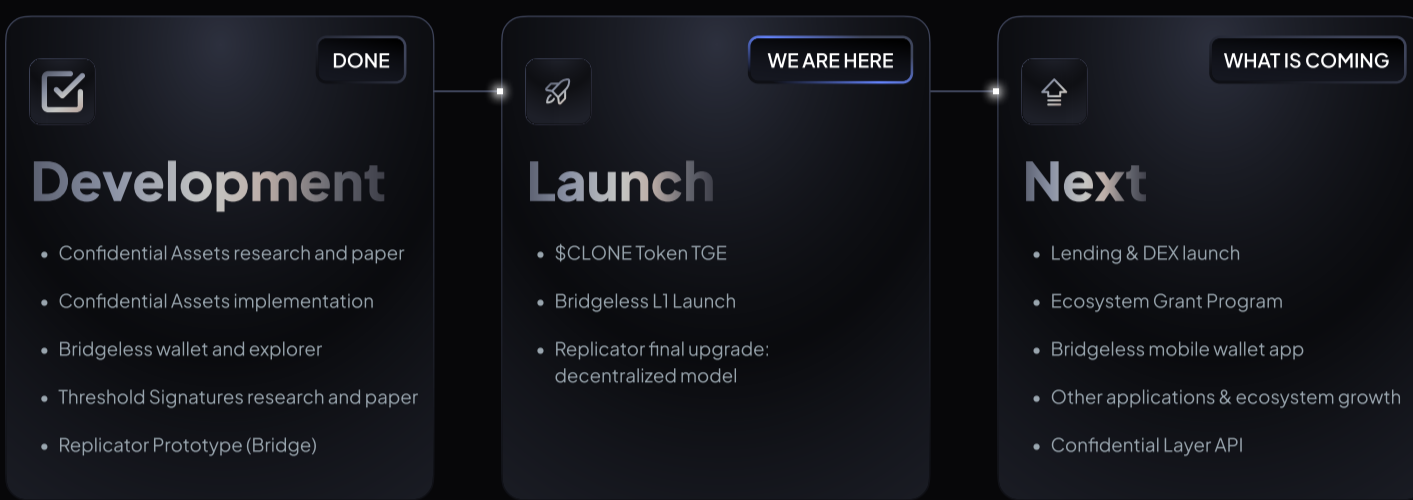

By developing an advanced cryptographic scheme of Threshold Signatures (based on Shamir's Shared Secret), **we make fully decentralised bridging possible**.

By creating dedicated solutions for each type of non-programmable blockchain, we are able to offer the most competitive terms on the market.

First fully developed product on Bridgeless L1, **Confidential Layer**, leverages Confidential Assets and Bridgeless Threshold Signatures. It employs advanced cryptographic techniques to enable private and secure cross-chain transactions between any EVM blockchain and the privacy blockchain.

Roadmap

Confidential Layer technology is already fully developed and ready for launch. We invite you to join us and benefit from exclusive access to future Bridgeless technologies.

Future solutions

Following this, we will launch unique solutions for transferring value between EVM and Bitcoin blockchain, and other desired programmable to non-programmable routes.

VALUATION

According to Coingecko reports and recent fundraising rounds in 2023 and 2024, the cross-chain solutions sector is valued at \$15 billion. Obtaining 3.33% of this market would equate to a valuation of \$500 million.

VOLUME

Since 2023, this sector has facilitated the transfer of over \$200 billion in total value across various platforms. The current estimated demand for the transfers and swaps that Bridgeless will offer, between EVM and other blockchains like Bitcoin or privacy networks, is \$20 billion monthly.

REVENUE

Currently, this volume is managed by inefficient, multi-step, and time-consuming processes involving exchanges, THORChain, OTC, or peer-to-peer markets, with costs ranging from 0.1% to 2% per transfer, depending on the platform and market conditions.

With Bridgeless newly developed technologies, we will be able to offer a convenient and efficient one-step solution with the aggregate fees of around 0.3%.

If we are able to capture 10% of the overall demand volume of **\$20 billion monthly**, we would be transferring \$2 billion with the monthly fees revenue of \$6 million, totalling **\$72 million yearly** based on the current demand and volumes.

\$CLONE Token distribution

Tokenomics

\$CLONE is currently in pre-sale stage. See the [official documentation](#) for further details.
